

LINXI LIANG

+(86) 18306647170 ◇ Shenzhen, China

linxiliang7170@gmail.com

EDUCATION

The Chinese University of Hong Kong, Shenzhen (CUHK-SZ)

Sep. 2026 (Expected)

PhD in Computer Science, School of Data Science

Supervisor: Prof. Pinjia He

Sun Yat-sen University (SYSU)

Sep. 2022 - Jun. 2026

Bachelor of Engineering in Software Engineering

GPA: 90/100

Relevant Courses: Deep Learning (97), Cloud Computing Technology(97), Software Testing (96), Discrete Mathematics (95), Java and Object-Oriented Design (93), Data Structures and Algorithms (92), etc.

Supervisor: Prof. Mingwei Liu

RESEARCH INTERESTS

AI for SE; Large Language Model Security and Privacy; Trustworthy AI

PUBLICATION

RESEARCH EXPERIENCE

Research on Automated Repository Upgrade Based on Large Language Models

Project leader, Supervised by Prof. Mingwei Liu

Feb. 2025 - Dec. 2025

- Led the project focused on using large language models to automate the software project upgrade process, specifically addressing challenges such as dependency updates, API changes, and code refactoring.
- Designed an interactive code migration assistant that automates code rewrites and generates test cases to ensure the correctness and performance of the upgrades.

API Evolution in Rust Programming Language

Project leader, Supervised by Prof. Mingwei Liu

Sep. 2024 - Mar. 2025

- Proposed a two-phase framework EVOEVAL, for constructing Rust API evolution datasets that combine multi-source data collection with LLM-based task generation.

- Constructed RUSTEVO², a dataset containing API changes from recent Rust versions paired with programming tasks designed to evaluate API-aware code generation capabilities.
- Worked on a research paper as the first author.

Code Search Optimization Techniques Based on Large Model Query Optimization and Code Optimization

Core Member, supervised by Prof. Yanlin Wang

Feb. 2024 - Dec. 2024

- Developed an innovative test-driven annotation framework achieving 93.0% accuracy for code search dataset annotation, significantly outperforming traditional human annotation and single LLM approaches.
- Contributed to the construction of CoSQA+, a pioneering multi-choice code search benchmark with 412,080 query-code pairs, incorporating advanced test-driven verification techniques.
- Co-authored a research paper demonstrating that CoSQA+ exhibits superior quality (60.3% better codes) and training performance compared to existing benchmarks.

PROJECT EXPERIENCE

TrustedGPT: Large Language Model Trustworthiness Evaluation Platform

Core Member

Oct. 2024 - Feb. 2025

- Evaluated mainstream large language models (including ChatGPT, Claude, Deepseek, etc.) on personal privacy protection and bias, developing targeted test datasets and conducting systematic assessments.
- Contributed to the development of a multi-dimensional evaluation framework for systematic testing and analysis of LLMs across reliability, safety, and fairness metrics.
- Assisted in building the platform's evaluation architecture to support comparative analysis of different models' trustworthiness capabilities across vertical domains. Promoted safer and more reliable deployment of generative AI technologies through continuous updates to evaluation standards and methodologies.

INTERNSHIPS

Ant Group, Ling Team, Research Intern

Dec. 2025 - Apr. 2026

Conducted post-training and alignment work on Ant Group's Ling LLM (v2.5), focusing on mathematical reasoning enhancement.

HKUST CSE, Visiting Research Intern

Jul. 2025 - Sep. 2025

Worked on improving LLM code generation under Rust API evolution, focusing on model robustness and adaptation to rapidly changing APIs. Supervised by Prof. Jialun Cao.

HONORS

- 2024 - 2025 National Scholarship for Undergraduate Students (Top 5%)
- 2024 - 2025 Sun Yat-sen University First-Class Outstanding Student Scholarship (Top 5%)
- 2023 - 2024 Sun Yat-sen University Third-Class Outstanding Student Scholarship (Top 30%)
